

INSTRUCTIONS FOR USE

WARNING

***NEVER ATTACH A SUPPRESSOR OR MUZZLE DEVICE TO A LOADED FIREARM. ALWAYS CLEAR FIREARMS PRIOR TO INSTALLATION.**

Before firing your new suppressor be sure the threads on your barrel match the end cap. We machine a precision thread that must be snug against the shoulder of your barrel. Thermal Suppressors will not be responsible for damage to firearm or suppressor due to poor threads.

Visually inspect that the path of the bullet is clear through the suppressor baffles, before firing, to avoid baffle strikes.

After 5-10 shots, snug your suppressor to the barrel (once warm), by hand or with provided aluminum wrenches.

SUPPRESSORS CAN GENERATE EXTREME AMOUNTS OF HEAT! CAUTION SHOULD BE USED WHEN REMOVING THE SUPPRESSOR FROM THE HOST FIREARM. DO NOT PUT YOUR SUPPRESSOR BACK IN THE CASE UNTIL IT IS COOL ENOUGH TO TOUCH.

Email us at thermalsuppressors@gmail.com with any questions or concerns prior to use.
